## How to connect your Autopilot Disconnect Circuit on the Generation 4 EFIS Products

This application note applies to all Generation 4 EFIS products manufactured after October 1 2006. The purpose of this note to give the proper wiring diagram for connection of the Autopilot Remote Disconnect feature available on all Gen 4 EFIS products when connected to the blue mountain Autopilot system.

Simply make the following connections;

The momentary button can be one of the available buttons on your stick grip. Run two wires from the button to the HDDB 26 pin connector, pins 23 and 1 or 7 for the grounding portion of the circuit. You may need to double up on the wire connected to pin 1 or 7.
