How to connect your Display Remote Toggle Circuit on the Generation 4 EFIS Products

This application note applies to all Generation 4 EFIS products manufactured after October 1 2006. The purpose of this note is to give the proper wiring diagram for connection of the Display Remote Toggle feature available on all Gen 4 EFIS products.

Simply make the following connections;

The momentary button can be one of the available buttons on your stick grip. Run two wires from the button to the HDDB 26 pin connector, pins 22 and 1 or 7 for the grounding portion of the circuit. You may need to double up on the wire connected to pin 1 or 7.

This feature works best with the EFIS Lite and Lite Plus models and allows the user to toggle from screen to screen through the use of a remote button.
